

The service I am Paying for is invaluable! My wife and I drive cross-country for a living and we depend on XM for important information such as the weather to where we are heading next and traffic, as to know which route is best to take. We think it is an outrage! Satellite and cable networks have broadcast television, why shouldn't XM carry weather and traffic? It's not like we can receive reception in the middle of the desert anyways. Tell those lobbyists to put a lid on it! We want our XM weather and traffic!
